

Dear colleagues, friends and members of the Swiss Oncology & Hematology Community

On behalf of the organizing committee, we are pleased to invite you to the

8TH SWISS ONCOLOGY & HEMATOLOGY CONGRESS (SOHC) IN BASEL, 19-21 NOVEMBER 2025

Bridging the Gaps in Patient Care

Dear Colleagues,

It is with great pleasure that we welcome you to the Swiss Oncology & Hematology Congress (SOHC) 2025 — a unique opportunity to come together in pursuit of a common goal: improving patient care.

Over the past few years, SOHC has grown into the leading hemato-oncological meeting in Switzerland, bringing together virtually all stakeholders in the field. Under the guiding theme “Bridging the Gaps in Patient Care,” the 2025 congress will be more than a scientific gathering — it will serve as a platform for dialogue, a catalyst for innovation, and a source of hope for patients and healthcare professionals alike.

Despite the impressive progress in cancer research and treatment, significant disparities remain. Whether geographical, economic, technological, or interdisciplinary in nature, these gaps hinder our ability to deliver optimal, personalized care. SOHC 2025 is dedicated to address these challenges — by promoting collaboration, sharing pioneering research, and exploring novel strategies to ensure equitable, effective, and forward-looking care for every patient.

This year's program will showcase the latest advances across the spectrum of oncology and hematology — from precision medicine and immunotherapy to AI-driven diagnostics and integrative support strategies. Renowned experts will present insights on emerging therapies, translational breakthroughs, and real-world clinical applications. In addition, we will share and discuss the National Cancer Plan and the Swiss Consensus Recommendations on Cancer Survivorship. Interactive sessions will provide opportunities to exchange ideas on how we, as a united scientific and medical community, can transform research into practice and innovation into tangible patient benefit. Educational tracks will also offer valuable learning opportunities for the next generation of healthcare professionals, with leading experts sharing their experience and guidance.

We invite you to contribute your knowledge, challenge ideas, and engage in meaningful conversations with peers from across disciplines. Together, we can and will shape the future of oncology and hematology — and close the gap between scientific progress and its implementation in everyday patient care.

We look forward to your participation. (edited by ChatGPT)

Warm regards,

Miklos Pless
